Sobriety chip color guide

One seller's example. Local customs vary.

AA does not prescribe a universal chip-color chart. Read the milestone stamped on the token and ask the group about its custom. This is not an official AA publication.

Wendells monthly aluminum tokens at The Token Shop
Verified seller descriptions, November 23, 2026. Selected milestones only.

1 month	Red
2 months	Gold-colored aluminum
3 months	Green
6 months	Blue
9 months	Purple

Swatches are illustrative flat graphics, not chip photographs or exact finish samples. Gold-colored aluminum is not a claim of solid gold.

Beginning tokens: Check the wording and group practice; this chart assigns no universal newcomer color.
Yearly tokens: Bronze and decorative colors are sold. Read the year number; green does not always mean three months.

Ask locally before a meeting or purchase

- Which beginning and milestone tokens does this group use?
- Does it count calendar months or particular day totals?
- Whom can I ask, and can I discuss a token privately?
